Mr. McKinney, Chairman of the Committee on part of Senate to examine and report the condition of the Florida State College experiment stations and sub stations.

SENATE CHAMBER,

TALLAHASSEE, FLA., May 24, 1895.

HON. F. T. MYERS,

President of the Senate:

SIR—Your joint committee to visit, examine and report the condition, prospects and methods of the Florida State College and the experimental station and sub stations, beg to submit the following report:

We found the college in a prosperous condition, and so far as we were able to judge, its methods are good, with an excellent discipline, and should receive a large patronage from those who have sons and daughters to educate, as both sexes can obtain in this college a practical business and classical education.

Your committee, unannounced and unexpected on that day, reached the college after 10 o'clock a. m., and when dinner was announced for the pupils, expressed a desire to dine with them in their mess hall, which privilege was accorded us, and we found the food sufficient in quantity, well cooked and served, and the mess hall in as good condition as can reasonably be expected. The mess hall and barracks need repairs, or should be built anew, with modern improvements, as soon as the financial condition of the State permits. There is not a bathtub in the barracks, no sewerage, and hence necessarily no water closets. The latter are situated some distance from barracks, and are relieved of their contents by carting. Every room in the barracks need some repairs inside, while all the buildings need a coat of outside paint.

The college should be enlarged or built anew, with such modern improvements as are necessary for the convenience, utility and comfort of a State institution. The different departments of the college are fairly supplied with necessary apparatus excepting the art and mechanics hall, which is in need of better and larger turning lathes. Fifty-six students, as per report, are taking lessons in the mechanical department. This department is open to both sexes of the school, and some of the young ladies and young men have constructed articles of use and value, neatly finishing them, and in some instances carving and engraving pretty designs. There are twenty-eight pupils taking lessons in stenography and typewriting; seven taking telegraphy, and thirty-nine students in commercial arithmetic, commercial law and book-keeping. Twenty-three pupils are taking analytical chemistry, and the recitation room is too small, as is the case in most all other class rooms.

The college gets its supply of water from the Lake City Waret Works Co., paying six hundred dollars annually for the same, while there is a good spring of water near by, and an engine in mechanic hall that could do the necessary work, if properly arranged. There seems to be some obstacles in the way of having the college water plant, and perhaps this six hundred dollar water supply had better be continued until obstacles are removed. The college and campus parade grounds are none too large at present, while every available foot of ground belonging to the State is inclosed and in use, and your committee recommend that if more ground adjacent to the college grounds cannot be obtained at a reasonable price, that the proper authorities take necessary steps to secure eligible, suitable and sufficient grounds for the necessities of this institution, and none but fee-simple deeds be accepted.

On the Experimental Station at Lake City, your committee found sixteen varieties of corn planted from 28th of March to 3d April (inclusive). The corn had been plowed and was relatively classed as follows:

EXPERIMENTAL STATION, LAKE CITY.

Name of variety.	Prospective quality.
Champion Pearl.....	good
Golden Beauty.....	fair
Early Uron.....	fair
Improved Learning.....	fair
Dacota Dent.....	fair
Long Fellow.....	good
Native Florida.....	very good
Minnesota King.....	fair
Mastadon Red.....	fair
Champion White Pearl.....	fair
Rustler White Dent.....	fair
Pride of the North.....	fair
Early Mastadon Yellow.....	fair
Mercer.....	inferior
Rosebud Flint.....	fair
Native Florida (little cob).....	extra good

And from present prospects the Experimental Station will produce sufficient grain to feed its stock another year. We found several varieties of forage plants on the farm but not sufficiently developed for their value to be determined, viz: Flat pea, Sacharine forage, Alfalfa, (Perinicals) Crimson clover, Dwarf Essexrape and Tiersente, (annuals), also six varieties of millet, and nine varieties of Spring oats vigorous and

promising. Five varieties of Spring wheat which will perhaps prove a failure. Irish potatoes planted April 1st of good size and quality, a small plat planted in Taro, looking well. The few plum and peach trees, were well fruited, as was also the Keiffer and LeConte pear trees, some of which were under treatment for Hybridizing. The vegetable garden is about half planted in vegetables which were in good condition; considerable of the garden area is taken up in terracing and draining tiles, which is expensive and difficult to keep in good condition. The fertilizers used were compounded on the Station.

The farm stock consists of a pair of good mules in good order, two cows and calves, two, two year old bulls, and one yearling heifer, about sixty head of hogs, some thorough bred Jersey reds, but most of them crossed with Jersey reds and native hogs, all of which were thrifty. The farm made sufficient hay for its use, but buys its grain feed. There is sufficient tools for the use of the farm, viz: Roller, mower, scraper, cultivators, harrows, seed-drills, rakes, shovels, forks, hoes, etc., one heavy two horse wagon and two, one horse wagons. The farm buildings i. e. superintendents residence, tenants houses, fertilizer and tool house, barns for both cattle and mules, are in good condition.

Your committee have no criticisms to make on the Station management, but believe it will be at a continual heavy outlay of money that a large portion of it can be kept in proper condition, requiring terracing on a portion to prevent washing away, and sub-draining on other portions to prevent its being too springy and water soaked, and we believe a more eligible and profitable location with greater acreage can yet be selected for experimental purposes. We find from the books that when the present board of trustees took charge of the college and station they inherited a legacy \$1,227.97 deficit on the agricultural college or land script fund. There was also a deficit of \$48.27 on Experimental Station or Hatch fund, and subsequently found outstanding bills against Experimental Station and Agricultural College fund of \$1,598.92, making a total indebtedness against present management of \$2,875.16, which should be provided for. As per requirements of House Resolution No. 57, we submit the following report of names and pay received by each person employed in Florida State College and on the Experimental Station, located at Lake City. The management of which is unquestionably good:

## THE COLLEGE AND STATION BOOKS.

The college and station books are kept by the "double entry" system. All accounts against college and station are investigated and passed upon by the auditor. The account being found correct, a voucher is issued therefor by the auditor against the fund from which it is to be paid. This voucher after being revised by the president, and receiving his endorsement, is numbered and entered upon a large book of distribution.

This distribution book is the original book of entry and gives the names of parties to whom the voucher is issued. The date of audit, the number and amount of voucher, the departments for which the account was made, for what purpose, the fund from which the account is to be paid, the total of college expenditures, the total of experiment station expenditures, the total of sub-station expenditures and the grand total of college, experiment station and sub-station's expenditures, and totals of each fund of college and station.

Upon the back of each voucher is a distribution list harmonizing with the items upon the distribution book, and the proper distribution is made upon the back of the voucher as a guide, and information to the secretary of the board of trustees who issues a warrant for the account from the distribution book, or original book of entry, is made upon the journal and ledgers both general and department.

The purser's books consist of a day book and ledger and contains the receipts of expenditures of all moneys for the incidental fund, conduct of mess hall and deposits from the students. A receipt is given for all moneys received, and the stubs preserved. The main expenditure is done by check upon the bank in which these funds are deposited.

#### FORT MYERS SUB-STATION.

W. A. Marsh, superintendent; salary \$600 per annum, payable in monthly installments. Labor \$300 per annum.

#### FORT MYERS SUB-STATION.

Your committee found at Fort Myers sub-station Mr. W. A. Marsh in charge, who had under fence cleared and grubbed 25 acres of as poor pine land as can be found in that vicinity; five acres of which, the State is said to have a fee simple deed to.

We found on this sub-station 250 citrus stocks which had been budged with eight different varieties of oranges viz: Majorca, Brazil, Bessie, King, Tardiff, Satsuma, Valincia and Washington Navel, all of which were in a very puny condition.

The tropical fruits were frosted to that extent that almost ruined them. The orange trees east of the Caloosahatchee river had not been materially injured by frost and were in full foliage from last years growth. The tropical fruits on the sub-station consisted of Cashew nut trees, 20 Olives 12, Aligator pear 10, Tamarines 6, Spanish Guavas 12, Catley Guavas 10, Sappadillo's 6, Mangroves 50, and also twelve varieties of pineapples all of which if fertilizers and drained in wet weather and fertilized and watered in dry weather may succeed. We found one acre cisel hemp one year old that was thrifty and bids fair to succeed,  $\frac{1}{2}$  of an acre in casava, (poor). We found a plat of land planted or set in cisel hemp said to be 40 thousand plants which this plat of land had been (as we were informed) rented to Dr. Clute by the trustees and was set out and cultivated at his individual expense. We found in a shed 40x110 feet all varieties of pineapples on the farm which were in better condition than those in open ground. One acre of barley, a failure, four acres in oats, a failure, about three acres of rye, which had been reaped, fair to good.

This station had been fertilized with six hundred pounds of compost per acre. We found growing 5 varieties of sweet potatoes and 3 varieties of Irish potatoes, the latter a failure—decaying and not yet grown; several varieties of sweet corn, but not as promising as a plat of popcorn. The garden is a failure except a few squash and beans. Your committee failed to find out the exact condition of the deeds to this property, but believe them to be conditional, and we recommend that all experiments at this sub-station be confined to the five acres originally intended for experimental purposes, and if better land in that vicinity cannot be obtained for experimental purposes, that the Fort Myers sub-station be abandoned. The tools on the sub-station are sufficient for the station work, consisting of Acme cultivator, plows, rakes, shovels, hoes, forks, etc., and one old cart, and one inferior one horse wagon. One horse, fair to good, with a two months supply of rye hay, but fed on bought grain.

The expense account of this sub-station is as follows:

Superintendent W. A. Marsh per annum, \$600; and the total expenses as herein given show that this sub-station from January 1, 1894, to May 1, 1895, is \$2,302.79.

## DEFUNIAK SPRINGS SUB-STATION.

The sub-station at DeFuniak Springs, in Walton county, has peach, plum and pear trees affected with insects—Curculio, Saniza scale and fungus, and fruit is falling from trees so that there will be but a small amount to mature. Pear blight has also made its appearance. There are forty pecan trees planted on this sub-station, only two years old.

Crops—Two acres of upland rice is planted, but not up. One and one-third acres in sugar cane, in good condition. A small plat of ground planted in ramie, not up. 1 acre planted in Spring oats, looking fairly well. There are ten varieties of forage millets planted but its value could not be determined. The fertilizer used is compost of acid phosphate potash and cotton seed meal and was used as follows: On garden truck 1,800 pounds per acre; sugar corn 1,250 pounds per acre; field corn 450 pounds per acre. The garden consists of 49 varieties of beans, 14 varieties of beets, 10 varieties of cabbage, 6 of carrots, 2 of collards, 21 of sugar corn, 28 of cucumbers, 6 of egg plant, 32 of musk melons, 30 of water melons, 4 of okra, 4 of onions, 22 of pepper, 9 of pumpkins, 22 of squash, 20 of tomatoes and 10 of turnips. Field corn, Hasting's red cob, Southern double eared and yellow dent, looking well and in good condition. Most of the lands are fresh and were broken with oxen belonging to Mr. J. T. Stubbs the superintendent and for the service of which, he only asks they be fed while at work. Considerable of the broken land can only be plowed with an ox owing to its being too wet and myres so that a mule can't be used. There is about 30 acres under fence and from seven to ten acres is too wet and sobbed for use.

There are seven branches of running and seeping water on this station, and the ground near them is too wet for cultivation.

The buildings on this station are in good repair. An addition 16x38 feet for kitchen and dining room is being completed. The barn and stalls for stock equal the necessities for this farm. No stock on this station except one good mule. The crops were worked out and in good condition. Your committee believe this station to be as poor land as any they saw in the locality, and situated on sloping hillsides and among spring branches. The titles to this station is conditional, and reverts to the grantors if the State fails to keep up the experiment station for the space of six months. The present superintendent when pressed for his opinion stated that a less available and eligible tract of land of the same size would be difficult to find in that vicinity.

We find the following expense accounts to have been audited and paid from January 1, 1894, to March 31, 1895; total \$2,099.02:
